

## Exercise B on conceptual modelling Gruppe 3.114

In connection with lecture "2. CONCEPTUAL MODELLING" you shall start to develop conceptual models at high abstraction level of your semester 7 project or part of functional system you sketched in exercise A. Also use the figure above to support your choice of system.

1. Define the overall *function(s)* of the system under consideration. Use initial needs and wishes expressed by the client + Rich picture q.4.

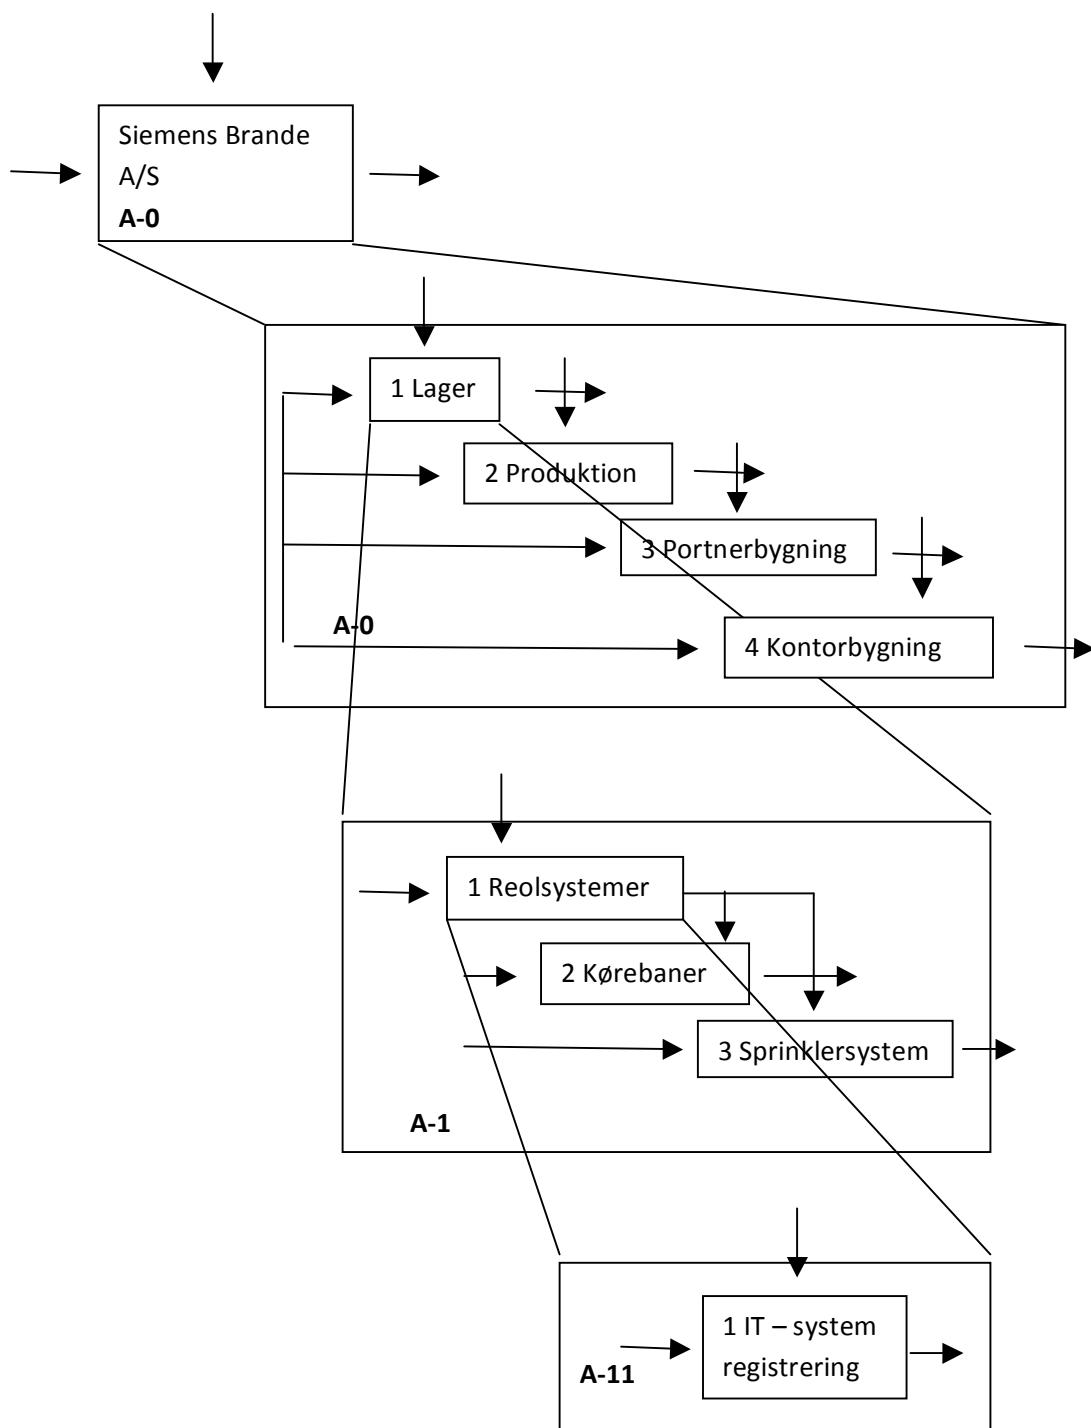

2. Try to give names on the *system* and it's *subsystems*.  
Produktionshallen – er det overordnede projekt.

- Lager
  - Kørebaner
  - Reolsystemer
    - IT-system registrering af varer
  - Sprinklersystem
- Produktion
- Portnerbygning
- Kontorbygning

3. Choose the system and subsystems you intend to model, design, and implement.

4. Start the modeling work by drawing *rich picture* conceptual models starting on top level. (som opgave 1)

5. Draw a top level process model using *IDEF0 diagram*.

6. Discuss what *possible UML diagrams* can be constructed during implementation

- Sequence Diagram – procesregistrering af lagerstyring
-
